

João Milone - Senior Game Software Engineer

São Paulo, SP, Brazil | (+55) 14 99151-0494 | joaocmil@hotmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

About Me

I'm a Senior Game Engineer with 7+ years in the game industry. My speciality is in Unity Engine (C# .NET) (2D, 3D & AR), but I'm also experienced in Unreal Engine 5, C++ and Blueprints. My work spans from mobile games (Android & iOS) to larger cross platform multiplayer games (Mobile, Console & PC), with a strong focus on gameplay mechanics, scalable architecture, UI/UX, analytics, progression, AI and physics systems.

Work Experience

Senior Game Engineer - Playgig, Los Angeles - USA (March/2022 - Current)

Contributing as a Senior Game Engineer with implementations of new features and game mechanics for a new cross platform MOBA game (Android, iOS, PC & Consoles).

- Responsible for the architecture and optimization of the character skills system, reducing by 93% the time designers needed to prototype new characters. After the implementation we obtained a fully data driven system with networked gameplay using Unity (C#);
- Developed server-authoritative gameplay systems (C# & Blueprints) to deliver smooth, responsive multiplayer experiences across platforms while maintaining good practices and clean code;
- Debug and optimization of complex logic in existing systems to ensure high quality code and bug free environment following design patterns within OOP;
- Architecting and implementing UI/UX front-end systems along with designers with an emphasis on performance and memory usage for a smoother gameplay;
- Implementing physic based gameplay mechanics for characters to interact with in-game items;
- Maintaining and improving AI systems such as GOAP and Behaviour Trees.

Unity Game Developer - Pipa Studios, São Paulo - Brazil (June/2021 - March/2022)

Contributing to the front-end gameplay features in live service bingo games using Unity 2D.

- System optimizations, improving the performance by around 20% in some slot machines ensuring an engaging and responsive gameplay experience;
- Implementing UI/UX systems with animations using DOTween;
- Designing meta systems with SQL databases for player progression and engagement;
- Code review and providing mentorship to junior team members.

Indie Game Developer - CrossBlack Studios, São Paulo - Brazil (2017 - Current)

Development of casual games (+15 games) using Unity (C#) 2D and 3D, for iOS and Android.

- Through back-end solutions such as Firebase I was able to track player's needs and issues, obtaining +1.5M downloads around the world;
- Developed and integrated monetization systems including IAPs & AdMob, reaching +62M Ads impressions and +1.2M Clicks and over 5k purchases in IAPs.

Education

- **UNESP - Bauru, SP - Brazil - Bachelor of Computer Science (2017 - 2022)**
- **[Unreal Fellowship 2024](#) - Unreal Fellowship: Games (2024)**
- **ETEP - São José Dos Campos - Brazil - Computer IT Course, (2012 - 2015)**
